Subject: IJCEE/IJENS 147506-2323: **Acknowledgement of Paper [with correction]**

Dear Author:

Thank you for submitting the paper to IJCEE/IJENS.

Title: Behaviour of Nailed-Slab System on Soft Clay Due to Repetitive Loadings by Conducting Full Scale Test

Author(s): Anas Puri, Hary Christady Hardiyatmo, Bambang Suhendro, and Ahmad Rifa'i

The file you sent for this paper printed fine.

It usually takes at least 3 weeks to make a decision about a paper.

You will be informed via e-mail when the decision has been made.

On behalf of the editorial board of IJCEE, I would like to thank you for your submission.

Thanks for your interest in IJENS.

Sincerely,

Chief Editor IJENS

| Manuscript Title: | Behaviour of Nailed-Slab System on Soft Clay Due to Repetitive Loadings by Conducting Full Scale Test | |
| Abstract: | The Nailed-slab System is a kind of rigid pavement. It is not a soil improvement method, but rather as an alternative method to improve the performance of rigid pavement on soft soils. This system consists of a thin reinforced concrete slab, and short piles attached underneath. The installed piles under the slab were functioned as slab stiffeners. This research is aimed to learn the behaviour of Nailed-slab System under repetitive loadings and its consideration for practical application. The full scale Nailed-slab System was conducted on soft clay which consisted of 6.00 m x 3.54 m slab area with 0.15 m in slab thickness, 15 short micro piles (0.20 m in diameter, 1.50 m in length, and 1.20 m in pile spacing) as slab stiffeners which installed under slab. Piles and slab were connected monolithically..... | |
