ACKNOWLEDGEMENT

Alhamdulillahirobbil'alamin, first of all i would like to extend my thanks to Allah SWT, for blessing and giving me strenght and health to complete this thesis entitled “ **An Analysis of Code Mixing in Nessie Judge Tweet’s**”. This thesis intended to fulfill one of requirement of Sarjana Degree in English Language Education, faculty of Teacher Training and Education, Universitas Islam Riau.

The researcher would like to express her thanks deeply to all people who gave me many contributions in completing this thesis, the researcher addresses her appreciation and express deep gratitude to the following individuals namely:

1. Dr.Sri Amnah, S.Pd., M.Si as dean of FKIP UIR and Dr. Miranti Eka Putri., S.Pd., M.Ed as the voice dean of FKIP UIR and all administrative staff of FKIP UIR Pekanbaru.
2. Muhammad Ilyas, M.Pd as the chief of English language education of FKIP UIR and Sri Wahyuni, S.Pd, M.Pd as the secretary of English language education of Fkip uir who has given suggestion and guidance during this thesis held.
3. Special thanks for my advisor Ma'am Fauzul Etfita S.Pd.,M.Pd who always contributes a lot of time in giving motivation, suggestion, corrections, encouragement and guidance for me in accomplishing this thesis and of course, for my examiner Ma'am Dr. Sri Yuliani, S.Pd.,M.Pd. and Ma'am Marhamah S.Pd.,M.Pd.
4. All lectures of English language education of FKIP UIR qho gave knowledge and helped me during my study.
5. Deep gratitude to my beloved parent, my father Yasrizal and my beloved mother Leni Zahara. Thanks a lot for the endless love, patient, support, advice, praying

and financial or other things that the researcher cannot mention one by one. I'm proud to be your daughter.

6. Sincere thanks my sister Yashara Salsabila and my brother Arofi Azizi, Araf Azizi who gave me support to finish this thesis.
7. Thanks to my bestfriend Nada Nadya, Nadya Agustin Arwan, Fauziah Dwi Annur, Nadya Qotrunnada Mahisa, Sri Rahayu, Dinda Dewantari, Salsanabilah Febriyanti, and my secret love and BTS.

Finally, the researcher hopes this thesis will be useful for the readers and future researchers, and also this thesis is still far from being perfect. Therefore, the criticism, advices, and suggestions are welcome. And may this thesis can be useful for the development of education.

ABSTRACT

Yashara Alda Fahira, (2022): An Analysis of Code Mixing in Nessie Judge's Tweets. Final Project. English Language Education, Faculty of Teacher Training and Education, Universitas Islam Riau

Keyword: *Nessie Judge, Code Mixing, Twitter, Tweet*

code-mixing is defined as a phenomenon where combining two or more languages at the same time. Code mixing is a new trend for the modern era, for example when someone said "which is sehennarnya" another example basically, literally, etc. Code mixing has become a popular phenomenon in Indonesia nowadays. Now, code-mixing is not only used in daily life but also used in movies, magazines, novels, YouTube, Facebook, Twitter, etc. Code mixing has become an interesting topic to be discussed especially code-mixing in tweets on Twitter.

The general purpose of this study was to determine code mixing in Nessie Judge's Tweets. The research design of this research is qualitative research. Researcher analyzed the data in types and reason by Hoffman Theory 1991. Then the analysis of this study was based on the data obtained from the documentation or screenshot.

The result of this study shows that there are three types of code mixing: intra sentential, intra lexical and involving a change pronunciation. And also found the reasons used code mixing: talking about particular topic, quoting somebody else, being emphatic about something, interjection, repetition used for clarification, expressing identity and solidarity, clarifying the speech content for interlocutor.

CHAPTER I

INTRODUCTION

1.1 Background of Research

Language is the most important thing in social life and it is used for communication and interaction with a person or group. Language is always involved in communication or interaction with someone. Moreover, language is used to deliver the messages and goals of the speaker to the listener. Also, language can be used spoken or signed to interact with other people in society. The relationship between language and society is called sociolinguistics.

Sociolinguistics is a branch of linguistics that etymologically comes from English, which consists of two derivative words that are socio and linguistics. Socio is the study of society and linguistics is the study of language. From the combination of those two words, sociolinguistics is defined as the study of language and society and for a better understanding when communicating or interacting while speaking. Then sociolinguistics studies related to differences in regional dialect, class, occupation, gender differences, and bilingualism.

Bilingualism is the ability to speak using more than one language. According to (Grosjean & Li, 2012), people who speak two or more languages (or dialects) in their daily life are called bilingualism. Therefore, bilingualism can be considered as a capability in mastering two more languages equally. Even though bilinguals are generally considered to an English speakers, who can speak, interact, read, or understand more than one language with the same ability

when they use or mix those languages. For example, the ability of Englonesian or to mix Singlish, that is combined at one spoken time. The ability to mix such two languages itself is known as code-mixing.

As the continuation of bilingualism in the extract above, code-mixing is defined as a phenomenon where combining two or more languages at the same time. Code mixing is a new trend for the modern era, for example when someone said “which is sebenarnya” another example basically, literally, etc. Code mixing has become a popular phenomenon in Indonesia nowadays. Now, code-mixing is not only used in daily life but also used in movies, magazines, novels, YouTube, Facebook, Twitter, etc. Code mixing has become an interesting topic to be discussed especially code-mixing in tweets on Twitter. Code mixing also uses language units from other languages to expand language styles and varieties of languages. The use of code-mixing can be easily found in every type and reason of tweet on Twitter. Twitter is a kind of social media, classified as new media or alternative media, is an information network consisting of 140 characters, called tweets, Zukhrufillah (2018).

Talking about code-mixing, the researcher also often finds this phenomenon on social media, for example in this research is on Twitter. Code mixing does not only occur in daily conversations, but also happens in social media networks, because nowadays, people still communicate through social media such as Twitter, Facebook, and Instagram. Social media can help people communicate, exchange information, share experiences, conduct discussions,

and conduct online business. According to Barkley (2013), social media also known as technology, is the general term for websites that connect people socially. The researcher found that some people use two languages or more when making tweets. In this case, the researcher is interested to analyze Nessie Judge's Twitter account.

Furthermore, Nessie Judge can be called as an Indonesian influencer that often uses code-mixing in her daily conversation. This is because Nessie Judge has a multilingual background. So, she often mixes her language between English and Indonesian when communicating in her daily life and in her social media. In this case, Nessie Judge uses code-mixing a lot between Indonesian-English in her tweets on Twitter. Based on the explanation above, the researcher decides to conduct a research about code-mixing found in Nessie Judge's tweets. The title of this research is "An Analysis of Code Mixing in Nessie Judge's Tweets".

1.2 Identification of Research

From the explanation above, it can be seen that code-mixing is not only used in daily conversations but is also widely used in social media such as newspapers, novels, YouTube, Twitter, etc. In this study, code-mixing occurred on Twitter, especially on the Twitter account of Nessie Judge.

In this case, the researcher found several phenomena, such as Nessie Judge using a lot of code-mixing in each of her tweets. She uses Indonesian-English code-mixing. From this situation, the researcher is interested in

analyzing the types and reasons for using code mixing contained in Nessie Judge's tweets based on Hoffman's theory.

1.3 Research Question

Two questions can be observed in this study. They are:

1. What types of code-mixing are found in tweets by Nessie Judge?
2. What are the reasons for using code-mixing in tweets by Nessie Judge?

1.4 Objectives of The Research

This study has general objectives, they are as follows:

1. To find out the type of code-mixing in Nessie Judge's tweets.
2. To find out the reason for code-mixing in Nessie Judge's tweets.

1.5 Assumptions

This research is focused on code-mixed in Tweets Nessie Judge. In this study, researchers took several Tweets 50 from to 100 Nessie Judge posts. This descriptive qualitative research is to determine the extent to which Nessie Judge uses code-mixing in her tweets posts.

1.6 Definition of Key Term

1. An analysis is a purpose of summarizing the collected data and organizing or studying the data to determine inherent facts. Hadi (2019) in this research researcher will analyze types and reasons for code-mixing.
2. Code Mixing is when a speaker uses two separate languages in a sentence or expression. Gunawan & Suparti (2018) sometimes people use two languages or more languages, they mixed their language with

another language. In this research, the researcher will found the types and reasons for code-mixing.

3. Twitter is a micro-blogging messaging service that limits you to 140 characters per message, including spaces and punctuation, to you update content. Dixon (2012) Twitter is a part of social media that is used by people today as a means of communication and information and the researcher wants to find out the types of code-mixing in Twitter.
4. Nessie Judge has the real name Nasreen Anisputri Judge, she is better known as Nessie judge in cyberspace. Nessie Judge is a YouTube celebrity or influencer.

1.7 Research Methodology

1.8.1 Research Design

The research design in this research is descriptive qualitative. Descriptive qualitative research it is a method used to analyze and explain phenomenon and situation Rugayah (2016:6) in Hadi (2019) the purpose of this research is to analyze the type of code-mixing on Twitter and the reason to use it. Qualitative research can also be described as an effective model that occurs in a natural setting that enables the researcher to develop a level of detail from being highly involved in the actual experiences.

1.8.2 Data Collection Technique

According to CIn (2013), people can use a variety of data collection techniques, such as observation, questionnaire, interview, test, and use of available information. In this study, the data will take from approximately 75 data of Nessie Judge. In data collection, there are several stages, as follows:

1. First, researchers look for Nessie Judge's Twitter account.
2. Second, the researcher reads several tweets made by Nessie Judge that contain code-mixing.
3. Then the researchers analyze the tweets that contain code-mixing.
4. Then the researcher identifies the code-mixing by reading the tweet transcript.
5. The researcher classified the type and reason of code-mixing based on Hoffman's 1991 theory.
6. Finally, the researcher identifies the type and reasons for using code-mixing based on Hoffman's 1991 theory.

1.8.3 Data Analysis Technique

The data was analyzed by a descriptive qualitative technique that finds material about code-mixing in social media Twitter. In doing this analysis the researcher used procedures as follows :

1. Step one, the researcher collects and read the tweet about code-mixing of tweets.

2. After collecting the data, the researcher identifies the appropriate and inappropriate code-mixing.

3. The researcher classified the Indonesia-English code-mixing of Nessie Judge's tweets into the types based on Hoffman's theory.

4. After classifying and identifying Indonesian-English code mixing, the researcher trying to find out the code-mixing in Nessie Judge's tweets.

CHAPTER II

REVIEW OF LITERATURE

In this chapter, the researcher will explain several theories related to the topics discussed in this research. There are definitions of sociolinguistics, bilingualism, code-mixing, types of code-mixing, reason of code-mixing, and Twitter.

2.1 Sociolinguistics

According to Holmes (2013), sociolinguistics study the relationship between language and society. Sociolinguistics explores the relationship between language and society (Georgieva, 2014). When people interact with other people in society, they must use a language. Without language, people will find some problems when doing their things. Activities with others the role of a language in people's lives very important Pascarina (2014), they are interested in explaining why we speak differently in different social contexts, and they are concerned with identifying the social functions of language and the ways it is used to convey social meaning. Examining the way people use language in different social contexts provides a wealth of information about the way language works, as well as about the social relationships in a community, and the way people convey and construct aspects of their social identity through their language.

According to Meyerhoff (2006), sociolinguistics is a very broad field, and it can be used to describe many different ways of studying a language. The polite social language model demonstrates a way of encoding identity

relationships in everyday language. If we can find this behavior in a wider sequence of social interactions, we have the opportunity to observe a series of important language role behaviors that appear at these critical moments. More generally, the research reported here demonstrates the usefulness of sociolinguistics methods. The level of use and analysis of linguistic data may open up new vantage points and new methods for various organizations 12 to research problems. By adopting different analytical frameworks for a given problem, it can help understand organizational phenomena by reconciling different or contradictory discoveries.

According to Sumarsono (2011: 4) as cited (Aziz et al. 2019), sociolinguistics is the study of operational language. Its purpose is to illustrate the relationship between language usage conventions and other aspects of culture. Therefore, sociolinguistics is the study of languages related to social conditions (by social sciences, especially sociological research). Sociolinguistics focuses on the relationship between language and its context of use. We use language to ask questions and provide information to people. We use it to express anger and worry, as well as admiration and respect. Usually, a kind of utterance conveys both information and expressions. Sociolinguistics is generally regarded as an interdisciplinary science that is derived from two basic elements, socio, and linguistics. Socio is similar to social, which is related to people in the society. Linguistics can be described as the scientific study of language, especially its basic elements (such as phonemes, morphemes, words,

sentences, and meaning) and the interrelationship between the elements (structures) including nature and formation of aforementioned elements (Khairunas 2016).

Defined to Sumarsih et al. (2014), sociolinguistics is the study of language function in a social context and the development of language in society. Sociolinguistics is an interesting and important field in teacher language because it involves the use and thinking of language in the real world. The researcher's study of language-related to society is sociolinguistics. Jamil & Nasrum (2018), point out that sociolinguistics explores languages related to society. This means that it is related to the language used for communication between different social groups in different social situations. Language and society may influence each other. Language and societies may influence each other. This influence is considered dialectical the nature of continuous interaction between speech act and social act this gives linguistic diversity and variability.

In other words, sociolinguistics may reflect the nature of language and the nature of society, we speak in different styles in different social contexts Sarwat Un Nisa (2019). This reflects a day's awareness of social factors that influence the right way of speaking in a different social context, sociolinguistics relates to the relationship between language and context that is used. Sociolinguistics is the study of the relationship between language and society. This means that sociolinguistics studies the use of language, where the language

is used, grammar, the various consequences of contact between two or more languages, and the types and times of users of various languages. In addition, this science also explains why people say different things in different social environments. Studying how people use language in different social environments can provide a lot of knowledge about how language works in society: especially about the social relationships in the community and the way people communicate and construct their social identity through the language they use.

2.2 Bilingualism

Bilinguals are people who speak at least two languages and have a certain level of proficiency. Although bilinguals are generally considered English speakers, they can speak, interact, read, or understand both languages with equal ability, in this case, balanced bilingualism. Bilingualism is usually better in one language. The definition of bilingualism is defined as the use of at least two languages by an individual or a group of speakers. Bilingualism is the norm in most countries of the world. Bilingual Bilingualism is a term in bilingualism. It is defined as the ability and ability to function equally in two or more languages in various fields. According to (Wallner, 2016) states that bilingualism is the ability to communicate in languages other than your first language. In Bali, many foreigners come, it could be that Balinese people can be bilingual, that is, mastering Indonesian and the language of the coming migration. In Indonesian, bilingualism is known as "*kedwibahasaan*" and it refers to the use of two

languages or two codes. A bilingual person is someone who speaks two languages and has achieved native-like fluency in both (Wasir 2012).

Furthermore, according to Ronald (2006), bilingual speakers are actually using the third code when they shift back and forth between two languages by code-switching. Therefore, the language used in code-switching and code-mixing is also called codes. There is no single agreed-upon definition of individual bilingualism. Many bilinguals are more proficient or fluent in one language or the other, differences between languages may reflect differences in proficiency rather than linguistics relativity (Asada 2013).

As specified by Permana (2014), the definition of bilingualism has a wide range, from the lowest level of the two languages to the advanced level, so that the speaker can play a role and appear as a native speaker of the two languages. A person may call himself bilingual, but only in terms of conversation and verbal communication skills. Regarding bilingualism probably could be used as a common definition of bilingualism. He said that bilingualism is defined as the use of at least two languages either by an individual or by a group of speakers. The process of bilingualism involves several factors that make the bilingual experience deeply heterogeneous and potentially alter its consequences Jayanti & Sujarwo (2019), the definition of bilingualism does not have the same concept, but it can be evaluated based on the level of skill development and the frequency of language use. It is related to social,

psychological, and language phenomena and needs to be understood from a multi-dimensional perspective.

According to Amalia n.d. (2017), most people consider bilingualism a good thing and an advantage. For one thing knowledge of another language enables people to communicate with other members of the culture in their language. Occurs when the speaker uses two languages. Pointed out that when a speaker masters two languages, the speaker will develop the habit of using two languages when interacting with others. Even now, people mix Indonesian and English when interacting with friends in real life and on social media.

According to Jayanti & Sujarwo (2019), bilingualism comes to multilingual proficiency, the same skills either in the mother tongue or the second language are usually rare. Usually, when one has increased expertise in one language compared to another, we call it uneven bilingualism, it is the most common kind that is important to say. However, that mother tongue is not always stronger than their new language, but if someone is proficient in using both the person is called bilingual.

2.3 Code Mixing

Defined by Syafrizal & Sari (2017), code-mixing is the transition from one language to another within the same utterance or oral/written text. Code mixing in this definition seems to be exactly the kind of linguistic behavior , ideal bilingual is not supposed to practice. Code mixing occurs when conversants use both languages together to the extent that they change from one

language to the other in the course of a single utterance. Code mixing does not necessarily lead to changes in themes or parts. This happens when a proficient person uses two languages at the same time so that they change from one language to another in the process of speaking at the same time. This change is called code-mixing. (Ramadhaniarti et al. 2010).

As mentioned by Aziz et al. (2019), code-mixing is a product of bilingualism and can lead to language contact. Indonesians who can speak bilingual or multiple languages will encounter problems when choosing a specific code (which can be a dialect or language) when needed, and they may also decide to switch from one code to another or mix Use verbal or written code. States that code-mixing and code-switching are very thin differences. Meanwhile, states that code-switching (also called code-mixing) can occur in a conversation between speakers turns or within a single speaker's turn. Described code-mixing is the use of two or more languages when talking to someone or between groups of code-mixing to be used to convey information.

In code-mixing, there are two languages in a sentence or speech where one language is more dominant than the other Gunawan & Suparti (2018) because usually code-mixing only mixes the first language with a few pieces of words from the second language in one sentence. That is why the first language is more dominant than the second language.

As Stated in Siddiq et al. (2020), code-mixing and code-switching are more than just combining two languages, speakers must also acquire sophisticated

knowledge of both languages as well as cross-cultural communication norms. Code mixing is a symptom of language use, in which the mixing or combination of different variants of the same clause in the code can be called (Internal code-mixing) (If this phenomenon indicates relative elements in the language, and if these elements do not interfere) and term (External code mixing).

In the opinion of Ramadhaniarti et al. (2010), code-mixing is a mixture of different languages. We can daily practice among people in the world for various reasons, usually unconscious activity. This language mixing is not the whole sentence, but may also appear in short phrases or words, In this case, the teacher will mix English (L2) And Indonesian (L1). They use their first language (L1) and their second language (L2) is in a different domain. This is not only used for daily communication, but can also used in the classroom to interact with fellow student, and teachers with students. As reported by Hilda et al. (2020), code-mixing is not restricted to everyday conversation. It also occurs in social media networking because people nowadays communicate through social media platforms such as Twitter, Facebook, and Instagram. People can use social media to communicate, exchange information, share experiences, hold discussions, and run online businesses. It allows people to communicate with one another without having to meet in person. The most used platform that is used by people right now is Twitter.

Bokamba (1988: 21-62) cited by Syafrizal. Astridyah Ratna Sari (2020), the code mixing definition has given, there is no social language considerations.

For him, code-mixing coincides with internal sentence code-switching. In this definition, code-mixing seems to be exactly a kind of language behavior, and “ideal bilingualism” should not be practiced. Code mixing occurs when people use two languages at the same time, and they convert from one language to another in the process of one language.

2.4 Types of Code Mixing

There are several theories from experts about code-mixing, as follows:

2.4.1 Hoffman’s Theory

According to Hoffman (1991) (Wibowo et al., 2017), there are three types of code-mixing, namely:

2.4.1.1 Intra-Sentential Code-Mixing

Intra-sentential code-mixing is the first type of code-mixing. This type is related to syntax. The mixing occurs within a sentence, a phrase, or a clause (Hoffman, 1991, p. 112). For example, “Estaba training para pelajar” which means “He was training to fight” (Wardhaugh 1992 p. 108). As you can see from this example, the codes are in English and Spanish. When the speaker speaks Spanish, then they add the English verb “training” in the middle of the sentence. When we want to add language units to a sentence, treat it as a code-mixing within the sentence.

2.4.1.2 Intra- Lexical Code-Mixing

The second type of code-mixing is intra-lexical code-mixing. This typically occurs within word boundaries. When adding affixes to words, mixing may occur. An example of this type is *Ku enjoy* (English *enjoy* is mixed with the prefix from Swahili and the meaning is “to”). The example shows that code-mixing may occur when a Swahili prefix is mixed with the English word “enjoy”. Other example is in Indonesian and English: “*Ga pernah se happy ini kegeser turun di trending*”. It is clear that there is an addition of the Indonesian prefix *di-* in English word “upload”. By using the prefix *di-*, it gives a passive meaning. Therefore, “*se-happy*” means “to be happy.”

2.4.1.3 Involving a Change of Pronunciation

This last type of code-mixing is related to phonological matters. To understand it, the example can be seen when Indonesian try to pronounce English word, they change it into Indonesian way of pronouncing. The example is taken from Hoffmann (1991, p. 112). Cristina (4:0): (introducing her younger brother to a new friend of hers). This is Pascual “*paskwál*”. Friend: “What’s his name?” (i.e. she didn’t catch it) Cristina: “Pascual” [pəskwæl]. Friend: “Oh..”

The example above, shows that at first Cristina pronounces Pascual as paskwál. Later, she pronounces it again and it becomes pəskwəl. There is a change of pronunciation that occurs.

2.4.2 Suwito's Theory

Meanwhile, Suwito (1983) Wibowo et al. (2017) in their book divide two types of code-mixing: inner code-mixing and outer code-mixing.

2.4.2.1 Inner Code Mixing

Inner code-mixing is mixing the language with their natural language. Usually, it happens in Indonesia, because Indonesia has many traditional languages in every region. So, they mix the Indonesian language with their regional language by inserting the elements of their language or elements of varieties and style into their dialect. Example: Yogi: Len, kamu bogoh sama Bintang nyak? (Len, you like Bintang, Don't you?Lena: Enggaklah, Mane hulah fitnah Saya! (No, you don't insult me!)Based on the example of the conversation, the speakers mix the Indonesian language with their Sundanese region language. The first speaker said to the second speaker that "Len, kamu bogoh sama Bintang nyak?" the first speaker said "bogoh" and "nyak", these words identify as the regional

language from West Java and the meaning of these words in the Indonesian language: “bogoh” is “suka” and “nyak” is “ya”.

2.4.2.2 Outer Code Mixing

Outer code-mixing is mixing the language that comes from a foreign language. It means, the speakers mix their national language with a foreign language. English is a common foreign language that many people mix with their national language with English. Example: April: Dan, yesterday Saya baru belia new bag, harga nya mahal pasti kamu gak sanggup belinya. (Dan, yesterday I just bought a new bag, the price is expensive and you will not be able to buy it) Dandy: Really, terus di manasekarang your a new bag? Gak kamu pakek? (Really, then where is your new bag? Don't you wear it? April: I am lazy untuk makek nya takut nya kamu jealous lagi sama Saya. (I am lazy to wear it I am scared if you are jealous of me). From the example of the conversation that there are two speakers from Indonesia, and they talk about a new bag. The first speaker changed his language when he said “yesterday” and “a new bag”, he mixed his nation language with a foreign language. Same as the first speaker, the second speaker also mixed the Indonesian language with the English language, he said “Really, terus di mana sekarang your a new bag”. So, it can

be said that the type of code-mixing from that conversation is outer code-mixing because they mix their national language with a foreign language.

2.4.3 Muysken's Theory

In addition, according to Muysken (2000), there are three types of code-mixing such as insertion, alternation, and congruent lexicalization. Here is the explanation:

2.4.3.1 Insertion

Insertion is the type of code-mixing that inserts a word in the conversation both oral and written. Commonly, people are using code-mixing with this type because they do not know the meaning of the word in their national language so that is why they mix it with a foreign language. Example: Kris: Agung, kamu pasti shock denger kabar ini! (Agung, you definitely shock to hear this news!) Agung: Kabar apa Kris? Hoax apa enggak? (What kind of news) is it a hoax or not?) From the example of the conversation, the speakers are dominant to use Indonesian language and they insert in the middle of their utterance with an English word. They insert the word of shock and hoax. By identifying the example of the conversation above, it can clarify that the type of code-mixing that appears in the conversation is the type of insertion code-mixing.

2.4.3.2 Alternation

Alternation occurs between clauses meaning that alternation is used when the speaker mixes his or her language with a phrase. For Example, Putra: Den, kamu sudah mengerjakan your home work belom? (Den, have you done your homework?) Deni: Belom Put, kemaren Aku a little bit busy sama perlombaan buat pramuka. (Not yet put, yesterday I was a little bit busy with my scout competition. The conversation above is talking about the homework. The first speaker asked the second speaker that he had done his homework by using the Indonesian language but the first speaker mixed the Indonesian language with the English language in his utterance by saying your homework. Then, the second speaker responded to the question of the first speaker by replying “Belom Put, kemarenAkua little bit busy sama perlombaan buat pramuka”. From the response of the second speaker, he mixed the Indonesian language with English, the English word which identifies as mixing the language is “a little bit busy” The code-mixing that the first speaker and second speaker included in a type of alternation code-mixing because they mixed in a phrase.

2.4.3.3 Congruent Lexicalization

Congruent lexicalization is the influence of dialect within language use. It means when the speaker speaks in his or her utterance the words which come out from his or her mouth it is like a foreign language. For instance, the Indonesian official language has some dialect with an English word. Usually, it happens in spoken form. Here the example of the conversation: Rezal: Ki, kamu lama sekali mengangkat telephone Saya, kamu lagi sibuk? (Ki, you are very long to accept my telephone, are you still busy?) Riki: Maaf Zal, Saya lagi ngerjain tugas di computer dan tidak focus ke hp (Sorry Zal, I am doing my task on computer and I do not focus to my phone). The example of the conversation shows that between the first speaker and second speaker did congruent lexicalization because of the words which identity as congruent lexicalization appears in their conversation such as telephone, computer, and focus. Those words are identified as congruent lexicalization. In analyzing Atta Halilintar's video YouTube channel, the Researcher looked for the types of code-mixing by using Hoffman's theory. Three of them are the same and every theory has a different purpose to identify the word which indicates code-mixing.

2.5 Reasons of Code-Mixing

Hoffman believes that there are seven reasons why people use code-mixing when communicating with others.

1.5.1 Talking about Particular Topic

Hoffman (1991, p. 115) believes that code-mixing may occur when there is a lack of facility in the register relevance or because there are particular things that trigger kinds of connotations that are related to experience in a specific language. When people cannot find the correct expression in a particular language, they may mix that language, so they mix it with another language.

2.5.1 Quoting Somebody Else

For this reason, a speaker mixes the language when she/he wants to quote a statement, a saying, etc. To understand clearly, here is an example given by Hoffman (1991, p. 112): An adult Spanish-Catalan bilingual: “y si dices “perdon”en castellano, e te vielve la mujer y te dice: “(and if you say “sorry” in Castilan Spanish, the lady turns to you and says”) En Catala” (In Catalan!). The example above, shows that the speaker mixes Spanish and Catalan languages. In the beginning, the speaker used Spanish, but then when she quoted someone, she used Catalan because that was the language she used to quote that person.

2.5.2 Being Emphatic about Something

In this case, code-mixing is used to express empathy for something. People may mix language to express empathy, intentionally or unintentionally. The example is derived from Hoffman (1991, p. 112): „Hay cuatro sillars rotas y” (There are four broken chairs and”) Prou! I (That’s enough!).”

Italics indicate that the speaker mixes language to express sympathy. The speaker uses a strong statement in the sentence, which shows that the speaker is sympathetic to something. Strong expressions are used to emphasize something important and to show empathy.

2.5.3 Interjection

Interjection according to Warriner (1982, p. 20) is a word that expresses emotion and the word does not have grammatical relation to other words in the sentence. Hoffman in his book gives an example to show the interjection:

An adult Spanish-American English speaker: Oh! Ay! It was embarrassing! It was very nice, though, but I was embarrassed! (Silva-Corvalan as cited in Hoffman, 1991, p. 112).

From the example above, it is obvious that the word Ay! does not have any grammatical meaning. However, the word Ay! is an expression of feeling embarrassed.

2.5.4 Repetition used for Clarification

Repetition is used to clarify that repetition is used to make people understand the speaker's participation and desire (Silva-Corvalan, 1989, p. 181). To understand this reason, here is an example as derived from Hoffman (1991, p. 112): An adult Spanish-English bilingual: "Tenia zapatos blancos, un poco, they were off-white, you know."

The repetition in the example is the sentence Tenia zapatos blancos, un poco which means they were off-white, you know. The repetition takes place to emphasize the message that the speaker conveys.

2.5.5 Expressing Group Identity or Solidarity

Some communities or groups use code-mixing to communicate and show their identity to other communities or groups. Speakers may mix their languages to be accepted by certain communities. Hewitt (1991) of Hoffman believes that members of a majority group, such as young whites in London, may switch the language to Jamaican Creole to be accepted by specific or specific groups (Hewitt cited in Hoffman (1991, p. 116).

2.5.6 Clarifying the Speech Content for the Interlocutor

In dialogue, code mixes will not only appear in single words, idioms or sentences, but also in speech. This is an example provided by

Hoffman (1991, p. 112): Christina (4:0): (Introduce her brother to her new friend) "This is Pascual" [paskwal] Friend: "What is his name Name? Christina: "Pascual! "[Pəskwæl] Friend: "Oh..." the pronunciation of the word Pascual. The speaker (Christina) changed the pronunciation of Pascual (English) into Spanish.

2.6 Twitter

The development of communication technology has a great impact on communication activity about human life today. Tamburaka Explains that the existence of social media is a form of the development of technology used by modern humans Communication (Tamburaka, 2013: 78). Twitter is one of them Many social media have attracted the attention of Internet users. That matters Because it is easy to use to exchange information So everyone on earth can connect.

2.6.1 History of Twitter

According to Madcoms (2010: 121) Nastiti (2016) the official website Twitter, Twitter was established in San Francisco on December April 19, 2007. Its mission is to give everyone a chance able to create and share ideas and information immediately proceed smoothly Currently, Twitter is one of the social media with users at most, there are 218 million people in the world (For Indonesia, Twitter microblog enthusiasts are also sufficient Lots. Based on data obtained from PT Bakrie Telecom, Indonesia ranks in the top five Twitter users

in the world by some users 19, 5 million). Around 62, 9% of Indonesian Twitter users are categorized as teenagers with an average age of 21 years.

2.6.2 The Content of Twitter

To understand the interface of Twitter, the screenshots below will show an accurately detailed look. The example here is the tweets from Twitter account of @Nessiejudge, an activity of content creator in Twitter.

Picture 1.1. Code Mixing Sample of Nessie Judge's Tweet

This is one example of code-mixing found in Nessie Judge's tweet. The example above is included in the types of Intra-Sentential Code-Mixing.

CHAPTER III

RESEARCH FINDING

3.1 Data Description

For this chapter, the researcher classified the data based on the types of code-mixing and described the reason of code-mixing. The data were gotten from the Nessie Judge’s tweets. The name of types intra sentential, intra lexical, involving a change of pronunciation and the reason are seven talking about a particular topic, quoting somebody else, being emphatic about something, repeating used for clarification, expressing group identity or solidarity, interjection, clarifying the speech content for the interlocutor. The data types of code-mixing and reason of code-mixing will be presented in table 3.1 as below :

Table 3.1 Data Description

N o.	Findings	Types of Code Mixing						IC P	Reason of Code Mixing
		ISCM				ILCM			
		Wo rd	Phra se	Clau se	Senten ce	Pref ix	Suff ix

3.2 Data Analysis

In data analysis, the researcher present types and reason of code-mixing found in Nessie Jugde's tweets.

3.2.1 Types of Code Mixing

Based on classification of the data from table 3.1 about the types of code mixing, it can be discussed as:

NO.	Types	Number
1.	Intra-Sentential Code-Mixing	
	Word	60
	Phrase	5
	Clause	9
	Sentence	21
2.	Intra-Lexical Code-Mixing	
	Prefix	1
	Suffix	16
3.	Involving a Change Pronunciation	4
Total		116

Table 3.2 display the data of types of code-mixing found in Nessie Jugde's tweet's.

Based on the table types of code mixing, the researcher found the are some types of code mixing that found, they are intra sentential, intra lexical and involving a change of pronunciation. And three of them, intra sentential of code mixing is much used by the speaker than the other.

3.2.2 Reason of Code-Mixing

Based on classification of the data from, about the reason of code mixing, it can be discussed as:

	Reason	Number
R1	Talking about a Particular Topic	65
R2	Quoting Somebody Else	2
R3	Being Emphatic about Something	23
R4	Repeating used for Clarification	-
R5	Expressing Solidarity	-
R6	Interjection	1
R7	Clarifying the Speech Content for Interlocutor	-
	Total	91

Table 3.3 display the data of reason of code-mixing found in Nessie Jugde's tweet's.

Based on the table types of code mixing, the researcher found the are some types of code mixing that found, they are talking about particular topic, quoting somebody else, being emphatic about something, interjection, repetition used for clarification, expressing identity and solidarity, clarifying the speech content for interlocutor. In this research finding there are seven and for the reason talking about a particular topic is the most found in this research.

In order to give more understandable concept, the data will be explain as follow:

1. Kalau menurutku **strenghtnya squid game** bukan di **plot twist**, tapi cerita & dilemma para karakternyaa. Suka banget **how they come back by choice** karena ternyata mereka lebih mending mati berjuang untuk sesuatu dalam game dari pada mati buat diluar sana.. **wdygt?**

From the utterance, it can be seen that there is a word that identified as intra-sentential code-mxing and intra lexical apperaed in Nessie Jugde's tweets, here is four types there are *word, sentence, phrase, and suffix*. She used Indonesian

language and she inserted English word *strength, squid game, plot twist, psychological. and wdytg.* and the English word *strength* is added with the Indonesian suffix “nya”.

- Word: in the sentence above there are two english words categorized as ‘word’ there are psychological, and nothing
- Phrase : in the sentence above there are two english words categorized as ‘phrase’ there are squid game and plot twist
- Sentence : in the sentence above there are two english words categorized as ‘sentence’ there are how they come back by choice and wdygt

From the data above, according to Hoffman's theory (1991) it is *talking about a particular topic* because here Nessie Judge's tells about a film called squid game and says that the strength of the squid game is not in a plot twist but in psychology and Nessie Judge's really likes it and says how they come back by choice instead of dying for nothing out there, and he asked wdygt?

2. Hahaha aja mungkin intonasi tulisan aku berubah kali ya di kepala mereka?

From the utterance, it can be seen that there is a word that identified as intra-sentential code-mixing apperaed in Nessie Jugde’s tweets. From the sentence above there is an English *word*, namely "positive" which is added to the Indonesian sentence.

- Word : in the sentence above there are one english word categorized as ‘word’ there is positive

From the data above, Nessie Judge *talking about a particular topic* because she said that her intonation was changed in other people thoughts.

3. Ha ada segelintir orang yang ngira aku gasuka **Squid Game? That’s crazyyyy! I absolutely loved it!** Cuma **twistnya** menurut aku ga segila itu, lumayan **predictable and it’s okayy**, karena itu ga mengurangi bagusny seriesnya..**People are so weird** haha

From the utterance, it can be seen that there is a word that identified as intra-sentential and intra lexical code-mixing apperaed in Nessie Jugde’s tweets, here

is three types there are word, sentence, and clause. She used Indonesian language and she inserted English word *Squid game? That's crazyyyy! I absolutely loved it!, twist, predictable and it's okayy, and people are so weird.* and the English word *twist* is added with the Indonesian suffix “nya”.

- Sentence : in the sentence above there are two english sentences categorized as ‘sentence’ there are Squid game? That’s crazyyyy! I absolutely loved it!, and people are so weird
- Clause : in the sentence above there one english word categorized as ‘clause’ there is predictable and it’s okayy
- Suffix : in the sentence above there are one english words categorized as ‘suffix’ there is twistnya

From the data above, Nessie Judge *talking about a particular topic* because she love squid game but the twist is too predictable.

4. **“SQUID GAME PLOT TWIST BANGET!!”Me after wathcing: which part?** Ini aku yang emg terlalu banyak nonton film, atau emang jelas banget twistnya dari awal □

From the utterance, it can be seen that there is a word that identified as intra-sentential and intra lexical code-mixing apperaed in Nessie Jugde’s tweets, here is four types there are *word, sentence, clause and suffix*. She used Indonesian language and she inserted English word *squid game plot twist, me after watching : which part?, intuitive, and twist.* and the English word *twist* is added with the Indonesian suffix “nya”.

- Clause : in the sentence above there are one english word categorized as ‘clause’ there is squid game plot twist
- Sentence : in the sentence above there one english word categorized as ‘sentence’ there is Me after wathcing: which part
- Suffix : in the sentence above there are one english word categorized as ‘suffix’ there is twist

- Word : in the sentence above there are one english word categorized as ‘word’ there is intuitive

From the data above, Nessie Judge talking about a *quoting somebody else* in the sentence “SQUID GAME PLOT TWIST BANGET!!” and particular topic because she was confused about her intuitive about the film or it just the twist. 73. Hhahaha **these are so funny.**

I know right, knp semua teori2 orang nyangkut disitu lagi...

Btw, siapa yang nikahan di Bermuda .

From the utterance, it can be seen that there is a word that identified as intra-sentential code-mixing apperaed in Nessie Jugde's tweets, here three types there is *clause, phrase and word*. She used Indonesian language and she inserted English word *these are so funny, i know right, btw, and trangle*.

- Clause : in the sentence above there is two english words categorized as 'clause' there are these are so funny and i know right.
- Phrase : in the sentence above there is one english word categorized as 'phrase' there is btw
- Word : in the sentence above there is one english word categorized as 'word' there is trangle

From the data above *talking about a particular topic* about marriage in the Bermuda triangle

74. Aku tantang kalian bikin meme

Atau kalau kalian nemu, **please tag** aku lagi pengen ketawa From the utterance, it can be seen that there is a word that identified as intra-sentential code-mixing apperaed in Nessie Jugde's tweets, here three types there is *word and phrase*. She used Indonesian language and she inserted English word *rewind, please tag, mood*.

- Phrase : in the sentence above there is two english words categorized as 'phrase' there is please tag
- word : in the sentence above there is one english word categorized as 'word' there is please tag

From the data above, *talk about a particular topic* about making a rewind meme and tag him because he's in the mood to laugh

75. Hmm kenapa ini **desc. Box** youtube gabisa di , dan informasinya beda2 di beda2. From the utterance, it can be seen that there is a word that identified as intra-sentential code-mixing apperaed in Nessie Jugde's tweets,

here two types there is *word and phrase*. She used Indonesian language and she inserted English word *desc.box, error, update*

- Phrase : in the sentence above there is one english word categorized as ‘phrase’ there is desc.box
- word : in the sentence above there is three english words categorized as ‘word’ there are error, update, devices

From the data above, *talking about a particular topic* about desc, box, youtube error, can't update and the information is different" on each device.

CHAPTER IV CONCLUSION AND SUGGESION

4.1 CONCLUSION

This chapter present the result of the research. As mentioned in beginning, this research has two question to be answered; the first is about the types of code-mixing and reason of code-mixing in Nessie Jugde's tweet's taken 22 october 2021 until 24 february 2022.

After collecting all the data, the researcher (116) utterances that contain code-mixing. By using the Hoffman theory, the researcher found 3 types of code-mixing that occured in the utterances tweet's Nessie Judge's, they are (75) data of intra sentential code-mixing , (95) data of intra lexical code-mixing, (17) data of involving a change pronounciation (4). The researcher also devided the first type of code-mixing namely intra sentential code-mixing, intra lexical code-mixing and involving a change pronounciation. From 116 data of intra sentential there were word (60) phrase(5) clause(9) sentence(21). And intra lexical code-mixing prefix (1) suffix (16) and last involving a change pronounciation only 4.

In order to answer the second question, the researcher used the same thoery from Hoffman about the reason if using code-mixing. The researcherr found that there are only four reason of seven reason stated by Hoffman that were found in data. The reason of using were talking about particular topic (65) whic mean the reason of using code-mixing is not because of the lack sentences indicated the certain topic. The second reason is being emphatic about something (23) which

mean to give strong expression to emphasize the important point of the sentence. The third reason is quoting somebody else (2) which means word, phrase or sentence that is quoted from someone else statement . the last reason of using code0mixing is intejection (1) which means repeat the utterances that already to emphasize the tweet's in Nessie Judge's. Since Nessie Judge's is the Youtuber and Influencer from Indonesia the tweet's used mostly used English language and Indonesia language.

4.2 SUGGESTION

The results of this research are expected to be applied in theory and practice. In theoritically, the results of this study are expected to contribute to the development of sociolinguistics research, especially in how to use code-mixing to analyze tweets. In practically, the results are expected to be useful for:

4.2.1 For English Students

Researchers hope that this research gives benefit to students, especially students of the English Department of the Islamic University of Riau, to increase their sociolinguistic knowledge, especially in code-mixing.

4.2.2 For Future Researchers

The researchers hope that this study can help other researchers obtain valuable information when conducting code mixing research.

4.2.3 For Readers

The writer hopes that this paper will be useful for readers to enrich their knowledge about code mixing so that they can use it in communication.
