ABSTRACT

Cooperative is a legal entity based on the principle of kinship that all members consist of individuals or legal entities with the aim to welfare is members. Cooperatives can also be defined as business entities that have members who each member has the duties and responsibilities of each where each member has the same right. The process of data management in KUD Talang Subur is still using manual way to manage data of saving and loan and member's income. The managed data loss during filing. With the many shortcomings and obstacles faced certainly can cause the work process takes time and energy long enough. Surely it must be addressed as soon as possible so that data can be stored safely. With the existence of data management system in *web* form is expected to facilitate and assist the cooperative in managing the data, able to provide the best service in accordance with the needs of the community. Based on the results of the existing correspondent testing can be concluded that the Information System of Savings and Loans and Income of Village Unit Cooperative Unit (KUD) Talang Subur *Web-Based* has a good performance with an average percentage value of 70%, so that this system can be implemented.
