Reviewer A:

Abstract (Abstrak):

The title is too general, it should be reformulated so that it is more concise, interesting, informative, specific and clear what issues are the issues of study.

abstract does not describe the criticism of the theory used, and is still general in nature. It is better to start with the issues raised are not general in nature.

Keywords are still too general, should be more specific

Introduction (Pendahuluan):

1. The introduction needs to be written in a more focused way so that the research issues are clearly defined.
2. Also explain the previous studies as the basis for this study and at the same time to show the novelty of this article. The state of art needs to be explained to show the urgency of this study.
3. the data is outdated and old, it needs the latest data.
4. Avoid explanations that are too general, present quantitative data to support this study as well as qualitative arguments
5. State explicitly the objectives to be achieved

Result and Discussion (Hasil dan Pembahasan):

1. Results are not clear. It does not at all reflect the results of the study based on the problems and methods used. What is displayed is not the results of the study, but the problems and previous studies. It should be included in the introduction section, not the results section.

The author must present data resulting from the use of various data collection techniques as described in the method.

Please remember that qualitative data is usually reported under various concise themes, and is provided by strong data. Please refer to the qualitative data presentation manual/handbook.

You should explain the key points of your findings so that they are correlated with the discussion. Paper analysis should be clear and comprehensive. The author must explain the research findings in a certain sub-topic. Reinforce statements or findings with data evidence from the data collection techniques used. In the discussion section, compare the findings with recent theory or findings from international studies.

2. Discussion.

The discussion you made is good and interesting, but how do we relate to the results because you don't display results. We highly recommend.

And we actually see that your discussion is more

Abstract (Abstrak):

The title is too general, it should be reformulated so that it is more concise, interesting, informative, specific and clear what issues are the issues of study.

abstract does not describe the criticism of the theory used, and is still general in nature. It is better to start with the issues raised are not

Literature Cited (Kepustakaan):

it is necessary to map the concept of deforestation more specifically and the concept of contemporary public policy.

Structure the Article (Struktur Artikel):

Structure has not consistently explained the inductive approach

Language (Tata Bahasa):

Credible translation institutions need to be strengthened

Conclusion (Kesimpulan):

Conclusions or closings need to be discussed comprehensively. The section needs to synthesize comprehensively, especially in terms of the author's critical evaluation of research findings, must explain your contribution to knowledge. Correspondence of conclusions with results is highly recommended. The conclusion, of course, must be able to answer the objectives of this study. To remember, the conclusion or conclusion in a scientific article is not a summary

Recommendation (Rekomendasi):

Major revision, required paper reconstruction

Notes (Catatan-Catatan):

adjust to the notes of each sub-chapter of the journal
